Chapter 1 Introduction	Chapter 2 Theoretical Background	Chapter 3 Related Works	Chapter 4 Real World Applications	Chapter 5 Results and Discussions	Chapter 6 Conclusions and Research Opportunities
1.1. Contextualization 1.2. Objectives 1.3. Motivation 1.4. Contributions 1.5. Publications 1.6. Outline	2.1. Forecasting Models 2.2. Decomposition Methods 2.3. Preprocessing Techniques 2.4. Performance Measures 2.5. Hypothesis Tests	3.1. Epidemiological 3.2. Renewable Energy 1 3.3. Renewable Energy 2	4.1. Decomposition methods applied to forecast COVID-19 cumulative case 4.2. Decomposition methods and stacking-ensemble learning approach to forecast wind energy generation 4.3. Multi-stage decomposition and stacking-ensemble learning strategy to forecast wind speed	5.1. Application 1 5.2. Application 2 5.3. Application 3	- Summary of the results - Limitations of the applications - Main contributions of the thesis - Future works and research opportunities
